RE: P-940260 Potlatch, Lewiston
(Permit to Construct Amendment Request)

Dear Mr. Fillgrove:

On December 14, 1994, DEQ received your application requesting to amend the SO₂ (sulfur dioxide) and NO_x (oxides of nitrogen) emission limits in your Permit to Construct for the No. 5 Recovery Boiler. Based upon revised NO_x and SO₂ emission limits obtained in your EPA Prevention of Significant Deterioration permit, DEQ has now determined that amending the emission limits in your Idaho Permit to Construct is appropriate. This letter will serve as the change in your permit.

Section 9 on page 3 shall now read:

Sulfur dioxide	50 parts per million, 112 lbs. per hour and 490 tons per yr.
----------------	--

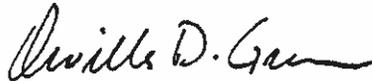

Nitrogen Oxide	100 lbs. per hour and 700 tons per yr.
----------------	--

Only the sulfur dioxide and nitrogen oxide emission design values change, all other provisions of the permit remain unchanged. It is recommended that a copy of this letter be attached to the copy of the permit that exists in your possession, because this will serve as your permit amendment.
