Rachael,

I read in the Bear Lake County news paper that DEQ was seeking comments on proposed revision to subsurface sewage disposal systems.

As you already know I am opposed to the 200 and 300 foot separation distance for new installations in unincorporated communities with small streams of water that must travel a distance exceeding one mile to come in contact with a major stream of water like the Bear River. A separation distance of 100 feet in my opinion is all that should be required.

I thank you for taking time to send me the information you did.

Many thanks,  
Stuart D. Crane
