---

Paula,

Thank you for putting this out. I think we are getting really close to as good as it can be. I have just one comment.

The system sand, Manufactured Medium Sand (MMS) associated with these Proprietary Treatment Systems is a component of the system and how they were tested at NSF. In section 009.04.e the way it is worded makes it sound like the MMS is a component of the trench or bed. I am concerned that the system sand component of the treatment system might get confused with sand used for backfilling in an in trench sand filter design.

Current wording:

Separation between the bottom of the manufactured medium sand component of the **trench or bed** to limiting layers, .....

**I propose the following wording to make things more clear:**

Separation between the bottom of the manufactured medium sand component of the **Proprietary Wastewater Treatment System** to limiting layers, .....

Thank you for the opportunity to comment.

Mike Reno
